

TEJAS NASHIKKAR

Software Engineer

nashikkar.tejas@gmail.com · 519-878-2669 · Kitchener, Ontario

SUMMARY

Software Engineer with 8+ years of experience architecting scalable frontend platforms and leading cross-functional initiatives to deliver unified, high-performing product experiences. Proven track record designing modern React ecosystems, mono repo architectures, and robust CI/CD automation pipelines that accelerate development velocity and guarantee production stability. Experienced technical mentor and Subject Matter Expert skilled at driving engineering excellence, running A/B experimentation programs, and utilizing AI-assisted tooling to maximize delivery. A collaborative, product-minded engineer who excels at evaluating technical tradeoffs, establishing rigorous testing systems, and delivering pixel-perfect, accessible user experiences using TypeScript, React, Next.js, and SCSS.

SKILLS

Languages: TypeScript, JavaScript, HTML, CSS/SCSS

Frontend: React, Next.js, Preact, Redux, Accessibility (WCAG 2.1 AA), Performance Optimization

Backend: Node.js, Fastify, Express, REST and GraphQL APIs, Microservices

Cloud & Infrastructure: AWS (Lambda, EventBridge, DynamoDB, SNS, SQS, Secrets Manager, CloudWatch, CDK), Docker, Kubernetes (EKS)

Architecture: Micro frontends, Mono repos (Lerna, PNPM), Shared NPM Packages, Pub-Sub Patterns

Testing & Quality: Jest, Vitest, Integration Testing, GitLab CI/CD, Husky, lint-staged

Observability: New Relic, PagerDuty

Experimentation & Analytics: Optimizely (A/B Testing), Adobe Analytics

AI-Assisted Development: GitHub Copilot, Agent Skill development and distribution using APM

EXPERIENCE

CARFAX - London, ON

Software Engineer | Feb 2024 - Present

- Led the architecture and built React-compatible Preact micro frontend applications within a Lerna/PNPM mono-repo, and Signals for state sharing, establishing a scalable frontend architecture that enables independent development, testing, and deployment, improving maintainability and team autonomy.
- Created a Vite-based build system for micro frontend applications, generating optimized JavaScript bundles integrated into CI/CD pipelines to support consistent and reliable deployments.
- Designed and implemented a manifest-based frontend distribution platform (FUR) in TypeScript that standardized deployment conventions across 18 applications, reducing developer deployment and coordination efforts by ~90%.
- Architected deployment CI/CD pipelines connecting micro frontend repositories to the distribution platform (FUR), streamlining release workflows and reducing deployment complexity across teams.
- Served as a technical mentor and Subject Matter Expert for engineers and new joiners, accelerating onboarding and driving cross-team adoption of shared infrastructure, distribution platforms, and modern frontend patterns.
- Built a shared pub-sub NPM package establishing cross-application communication conventions and reusable abstractions that enabled independently developed frontend applications to operate as a cohesive user experience and built a comprehensive document for ease of its consumption.
- Developed a shared New Relic instrumentation package adopted by 4 applications, reducing onboarding effort for new applications from hours to minutes while standardizing observability.
- Created a healthy unit test coverage for frontend components using Jest and automated the test runs on every commit using Husky + Lint-staged, and in the GitLab pipelines for every commit and merge request, improving code quality in 10 repositories.
- Collaborated closely with product managers and designers in an agile project to deliver customer-facing React and Next.js experiences for the CARFAX account page, including complex features, account management workflows, frontend experimentation via Optimizely, and user interaction analytics through

Adobe Analytics. Implemented clean style sheets using modular SCSS and React Context API for state sharing.

- Implemented a Node.js/Fastify service powering personalized vehicle recommendations for hundreds of thousands of daily users, enabling experimentation and targeted experiences that contributed to a 20% increase in dealer-led traffic. Added an integration test suite that runs on the deployed environment to check the functionality and automated Promote and Rollback jobs based on the test result.
- Developed reusable AI Agent Skills distributed through Agent Package Manager (APM) to orchestrate AWS EKS migration workflows, reducing migration time by ~80% while standardizing and validating engineering processes across teams.
- Implemented CDK for provisioning AWS resources like SQS, SNS, EventBridge, Lambda, DynamoDB, Secret Manager, and IAM Roles.

Conestoga College - Waterloo & Brantford, ON

Professor (Part-time) | Jan 2024 - Dec 2024

- Taught Advanced Full Stack Development covering React, GraphQL, and AWS - reinforcing the mentorship and technical knowledge-sharing developed throughout my engineering career.

Longbow Advantage - Mississauga, ON

UI Developer | Sept 2022 - May 2023

- Built interactive, data-rich warehouse management interfaces using D3.js to visualize complex operational data in real time.
- Implemented CI quality gates using pre-commit hooks (Husky + lint-staged) to automatically enforce TypeScript and code quality standards - ensuring issues were caught before reaching CI pipelines and raising the quality floor across the entire frontend codebase.

Media.net Software Service - Mumbai, India

Senior UI Developer | Aug 2019 - Apr 2021

- Led end-to-end development of internal dashboard tools (Datachimp & Console) using React, Redux, Angular 6+, and Express.
- Authored custom SCSS and JavaScript component libraries, trained the team on adoption, and drove UI consistency across products through code reviews and mentorship.

Accenture Solutions - Mumbai, India

Web Developer | Oct 2018 - Aug 2019

- Implemented and maintained enterprise client websites using Sitecore, jQuery, and HTML/LESS.

Media.net Software Services - Mumbai, India

Jr. UI Developer | May 2016 - Sept 2018

- Built ad units, landing pages, and product dashboards with cross-browser support using HTML, CSS, and JavaScript.

EDUCATION

Conestoga College

Post-Graduation in Web Design and Development · GPA: 3.92 · 2021 - 2022

Ontario, Canada

Mumbai University

Bachelor of Engineering in Computer Science · 2012 - 2015

Mumbai, India

CERTIFICATIONS

AWS Certified Cloud Practitioner · April 2025
